Forecast for Monday 11 Jan 2021

Weather: Cloudy with occasional rain overnight and in the morning, mainly over the west of the area with wet snow at first above 900m but rising to 1300m for a time. Then in the early afternoon a band of heavier rain will reach the Northern Cairngorms and Monadhliath Hills this suddenly turning to snow, even down to low levels. This colder air gradually filtering south across the region reaching Ben Alder by dusk turning the rain to snow. This will turn lighter before drier clearer conditions will follow from the north through the evening.

Chance of cloud free mountain/hill tops above 800m: 30%, falling 10% in the north in snow, improving 70% later in the evening.

Visibility: Cloud bases: In the milder zone, mainly around 600-800m, the lower bases in the west, but as the colder weather tucks in to the north, bases will fall to 450m in snow. Visibility below cloud: Occasionally good in the east in the morning but moderate to poor in rain in the west, then falling markedly as it turns to snow before a final improvement as it turns clearer through the evening.
